Private (lat. privatus, privare, „set apart, separated, deprived“, privatum, „that which is one’s own“ and privus, „existing for oneself“).

"Private“ usually belongs to a single person or a limited group who have an intimate or confidential relationship with each other. The root word is often combined with other terms to make it clear that it is not a public matter: privacy, private party, privatisation, private, privateness....

„The only way to ensure the darkness of what must remain hidden from the light of publicity is private property, a place to which no one has access - where one is at once safe and hidden.“

HANNAH ARENDT

Hannah Arendt refers in her quote foremost to the protected space within one's own four walls. This refuge was and is not always a matter of course: neither the caves of our hunting or gathering ancestors, the communal houses of today's primitive peoples, nor the slums in numerous countries allow sufficient privacy. Waking and sleeping, procreation & birth, eating, adolescence, illness and death take place in the presence of others. In this sense, privacy is a result of social progress. In the internet-driven age, the boundaries between the private & public spheres are once again becoming increasingly blurred. Work and family, thoughts and emotion,

data and attitudes are no longer just „private“: posts of daily meals, intimate moments, selfies in every imaginable place or the permanent photograph of one's own offspring are just the icy tips of self-portrayal on the internet. On the other hand, we agree to the processing of our data without even reading the sprawling texts of the terms and conditions ...

But one's privacy encompasses far more than just images on social networks or companies that do unimaginable things with our data sets. Privacy also exists in our thoughts, fears, expressions, representations, obfuscations and in every other area that is not directly accessible to the public.

GOOGLE PRIVACY POLICY
Effective March 31, 2020

When you use our services, you're trusting us with your information. We understand this is a big responsibility and work hard to protect your information and put you in control. This Privacy Policy is meant to help you understand what information we collect, why we collect it, and how you can update, manage, export and delete your information.

Privacy Checkup
Looking to change your privacy settings?
Take the Privacy Checkup

Effective February 4, 2021 | Archived versions | Download PDF

We build a range of services that help millions of people daily to explore and interact with the world in new ways. Our services include: Google apps, sites, and devices, like Search, YouTube, and Google Home. Platforms like the Chrome browser and Android operating system. Products that are integrated into third-party apps and sites, like ads and embedded Google Maps.

You can use our services in a variety of ways to manage your privacy. For example, you can sign up for a Google Account if you want to create and manage content like emails and photos, or see more relevant search results. And you can use many Google services when you're signed out or without creating an account at all, like searching on Google or watching YouTube videos. You can also choose to browse the web privately using Chrome in Incognito mode. And across our services, you can adjust your privacy settings to control what we collect and how your information is used.

To help explain things as clearly as possible, we've added examples, explanatory videos, and definitions for key terms. And if you have any questions about this Privacy Policy, you can contact us.

INFORMATION GOOGLE COLLECTS

We want you to understand the types of information we collect as you use our services. We collect information to provide better services to all our users — from finding out basic stuff like which language you speak, to more complex things like which ads you'll find most useful, the people who matter most to you online, or which YouTube videos you might like. The information Google collects, and how that information is used, depends on how you use our services and how you manage your privacy controls.

When you're not signed in to a Google Account, we store the information we collect with various identifiers tied to the browser, application, or device you're using. This helps us do things like maintain your language preferences across browsing sessions.

When you're signed in, we also collect information that we store with your Google Account, which we treat as personal information. Things you create or provide to us.

When you create a Google Account, you provide us with personal information that includes your name and a password. You can also choose to add a phone number or payment information to your account. Even if you aren't signed in to a Google Account, you might choose to provide us with information — like an email address to receive updates about our services.

We also collect the content you create, upload, or receive from others when using our services. This includes things like email you write and receive, photos and videos you save, docs and spreadsheets you create, and comments you make on YouTube videos. Information we collect as you use our services: Your apps, browsers & devices.

We collect information about the apps, browsers, and devices you use to access Google services, which helps us provide features like automatic product updates and dimming your screen if your battery runs low.

The information we collect includes unique identifiers, browser type and settings, device type and settings, operating system, mobile network information including carrier name and phone number, and application version number. We also collect information about the interaction of your apps, browsers, and devices with our services, including IP address, crash reports, system activity, and the date, time, and referer URL of your request.

We collect this information when a Google service on your device contacts our servers — for example, when you install an app from the Play Store or when a service checks for automatic updates. If you're using an Android device with Google apps, your device periodically contacts Google servers to provide information about your device and connection to our services. This information includes things like your device type, carrier name, crash reports, and which apps you've installed. Your activity.

We collect information about your activity in our services, which we use to do things like recommend a YouTube video you might like. The activity information we collect may include: Terms you search for, Videos you watch, Views and interactions with content and ads, Voice and audio information when you use audio features, Purchase activity, People with whom you communicate or share content, Activity on third-party sites and apps that use our services, Chrome browsing history you've synced with your Google Account.

If you use our services to make and receive calls or send and receive messages, we may collect call and message log information like your phone number, calling party number, receiving party number, forwarding numbers, sender and recipient email address, time and date of calls and messages, duration of calls, routing information, and types and volumes of calls and messages. You can visit your Google Account to find and manage activity information that's saved in your account.

Go to Google Account
Your location information

We collect information about your location when you use our services, which helps us offer features like driving directions for your weekend getaway or showtimes for movies playing near you. Your location can be determined with varying degrees of accuracy by: GPS, IP address, Sensor data from your device.

The types of location data we collect depend in part on your device and account settings. For example, you can turn your Android device's location on or off using the device's settings app. You can also turn on Location History if you want to create a private map of where you go with your signed-in devices.

In some circumstances, Google also collects information about you from publicly accessible sources. For example, if your name appears in your local newspaper, Google's Search engine may index that article and display it to other people if they search for your name. We may also collect information about you from trusted partners, including marketing partners who provide us with information about potential customers of our business services, and security partners who provide us with information to protect against abuse. We also associate information from advertisers to provide advertising and research services on their behalf.

We use various technologies to collect and store information, including cookies, pixel tags, local storage, such as browser web storage or application data caches, databases, and server logs.

WHY GOOGLE COLLECTS DATA

We use data to build better services. We use the information we collect from our services for the following purposes: Provide our services.

We use your information to deliver our services, like processing the terms you search for in order to return results or helping you share content by suggesting recipients from your contacts. Maintain & improve our services.

We also use your information to ensure our services are working as intended, such as tracking outages or troubleshooting issues that you report to us. And we use your information to make improvements to our services — for example, understanding which search terms are most frequently misspelled helps us improve spell-check features used across our services. Develop new services.

We use the information we collect in existing services to help us develop new ones. For example, understanding how people organized their photos in Picasa, Google's first photos app, helped us design and launch Google Photos. Provide personalized services, including content and ads.

We use the information we collect to customize our services for you, including providing recommendations, personalized content, and customized search results. For example, Security Checkup provides security tips adapted to how you use Google products. And Google Play uses information like apps you've already installed and videos you've watched on YouTube to suggest new apps design and launch Google Photos.

Depending on your settings, we may also show you personalized ads based on your interests. For example, if you search for "mountain bikes," you may see an ad for sports equipment when you're browsing a site that shows ads served by Google. You can control what information we use to show you ads by visiting your ad settings.

We don't show you personalized ads based on sensitive categories, such as race, religion, sexual orientation, or health.

We don't share information that personally identifies you with advertisers, such as your name or email, unless you ask us to. For example, if you see an ad for a nearby flower shop and select the "tap to call" button, we'll connect your call and may share your phone number with the flower shop.

Go to Ad Settings
Measure performance

We use data for analytics and measurement to understand how our services are used. For example, we analyze data about your visits to our sites to do things like optimize product design. And we also use data about the ads you interact with to help advertisers understand the performance of their ad campaigns. We use a variety of tools to do this, including Google Analytics. When you visit sites that use Google Analytics, a Google Analytics customer may choose to enable Google to link information about your activity from that site with activity from other sites that use our ad services. Communicate with you.

We use information we collect, like your email address, to interact with you directly. For example, we may send you a notification if we detect suspicious activity, like an attempt to sign in to your Google Account from an unusual location. Or we may let you know about upcoming changes or improvements to our services. And if you contact Google, we'll keep a record of your request in order to help solve any issues you might be facing. Protect Google, our users, and the public.

We use information to help improve the safety and reliability of our services. This includes detecting, preventing, and responding to fraud, abuse, security risks, and technical issues that could harm Google, our users, or the public.

We use different technologies to process your information for these purposes. We use automated systems that analyze your content to provide you with things like customized search results, personalized ads, or other features tailored to how you use our services. And we analyze your content to help us detect abuse such as spam, malware, and illegal content. We also use algorithms to recognize patterns in data. For example, Google Translate helps people communicate across languages by detecting common language patterns in phrases you ask it to translate.

We may combine the information we collect among our services and across your devices for the purposes described above. For example, if you watch videos of guitar players on YouTube, you might see an ad for guitar lessons on a site that uses our ad products. Depending on your account settings, your activity on other sites and apps may be associated with your personal information in order to improve Google's services and the ads delivered by Google.

If other users already have your email address or other information that identifies you, we may show them your publicly visible Google Account information, such as your name and photo. This helps people identify an email coming from you, for example.

We'll ask for your consent before using your information for a purpose that isn't covered in this Privacy Policy.

SHARING YOUR INFORMATION

When you share your information

Many of our services let you share information with other people, and you have control over how you share. For example, you can share videos on YouTube publicly or you can decide to keep your videos private. Remember, when you share information publicly, your content may become accessible through search engines, including Google Search.

When you're signed in and interact with some Google services, like leaving comments on a YouTube video or reviewing an app in Play, your name and photo appear next to your activity. We may also display this information in ads depending on your Shared endorsements setting.

When Google shares your information

We do not share your personal information with companies, organizations, or individuals outside of Google except in the following cases: With your consent.

We'll share personal information outside of Google when we have your consent. For example, if you use Google Home to make a reservation through a booking service, we'll get your permission before sharing your name or phone number with the restaurant. We'll ask for your explicit consent to share any sensitive personal information.

With domain administrators

If you're a student or work for an organization that uses Google services, your domain administrator and resellers who manage your account will have access to your Google Account. They may be able to: Access and retain information stored in your account, like your email. View statistics regarding your account, like how many apps you install. Change your account password. Suspend or terminate your account access.

Receive your account information in order to satisfy applicable law, regulation, legal process, or enforceable governmental request. Restrict your ability to delete or edit your information or your privacy settings.

For external processing

We provide personal information to our affiliates and other trusted businesses or persons to process it for us, based on our instructions and in compliance with our Privacy Policy and any other appropriate confidentiality and security measures. For example, we use service providers to help us with customer support. For legal reasons.

We will share personal information outside of Google if we have a good-faith belief that access, use, preservation, or disclosure of the information is reasonably necessary to: Meet any applicable law, regulation, legal process, or enforceable governmental request. We share information about the number and type of requests we receive from governments in our Transparency Report. Enforce applicable Terms of Service, including investigation of potential violations. Detect, prevent, or otherwise address fraud, security, or technical issues. Protect against harm to the rights, property, safety, or safety of Google or users, or the public as required or permitted by law.

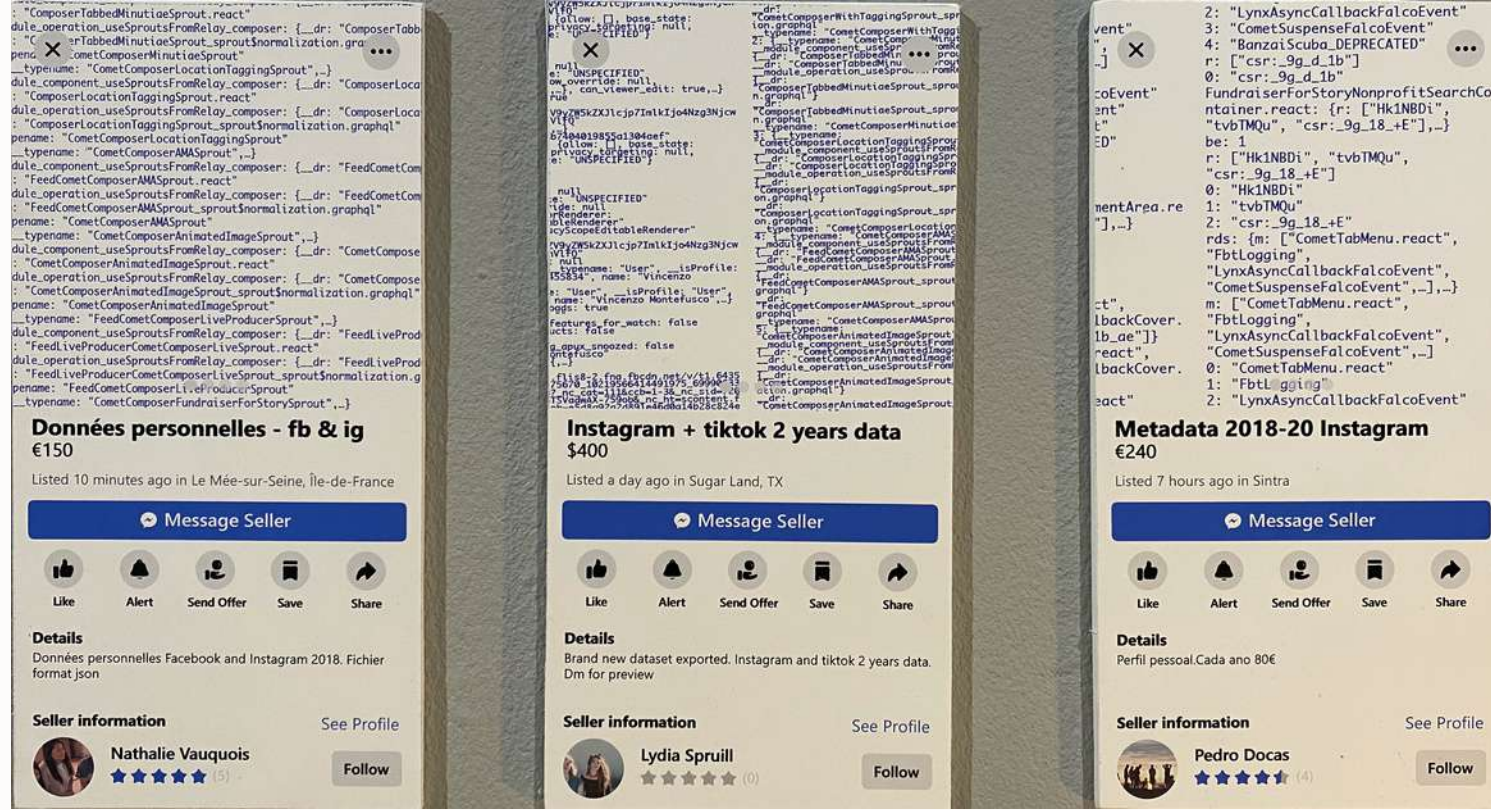

We may share non-personally identifiable information publicly and with our partners — like publishers, advertisers, developers, or rights holders. For example, we share information publicly to show trends about the general use of our services. We also allow specific partners to collect information from your browser or device for advertising and measurement purposes using their own cookies or similar technologies.

If Google is involved in a merger, acquisition, or sale of assets, we'll continue to ensure the confidentiality of your personal information and give affected users notice before personal information is transferred or becomes subject to a different privacy policy.

KEEPING YOUR INFORMATION SECURE

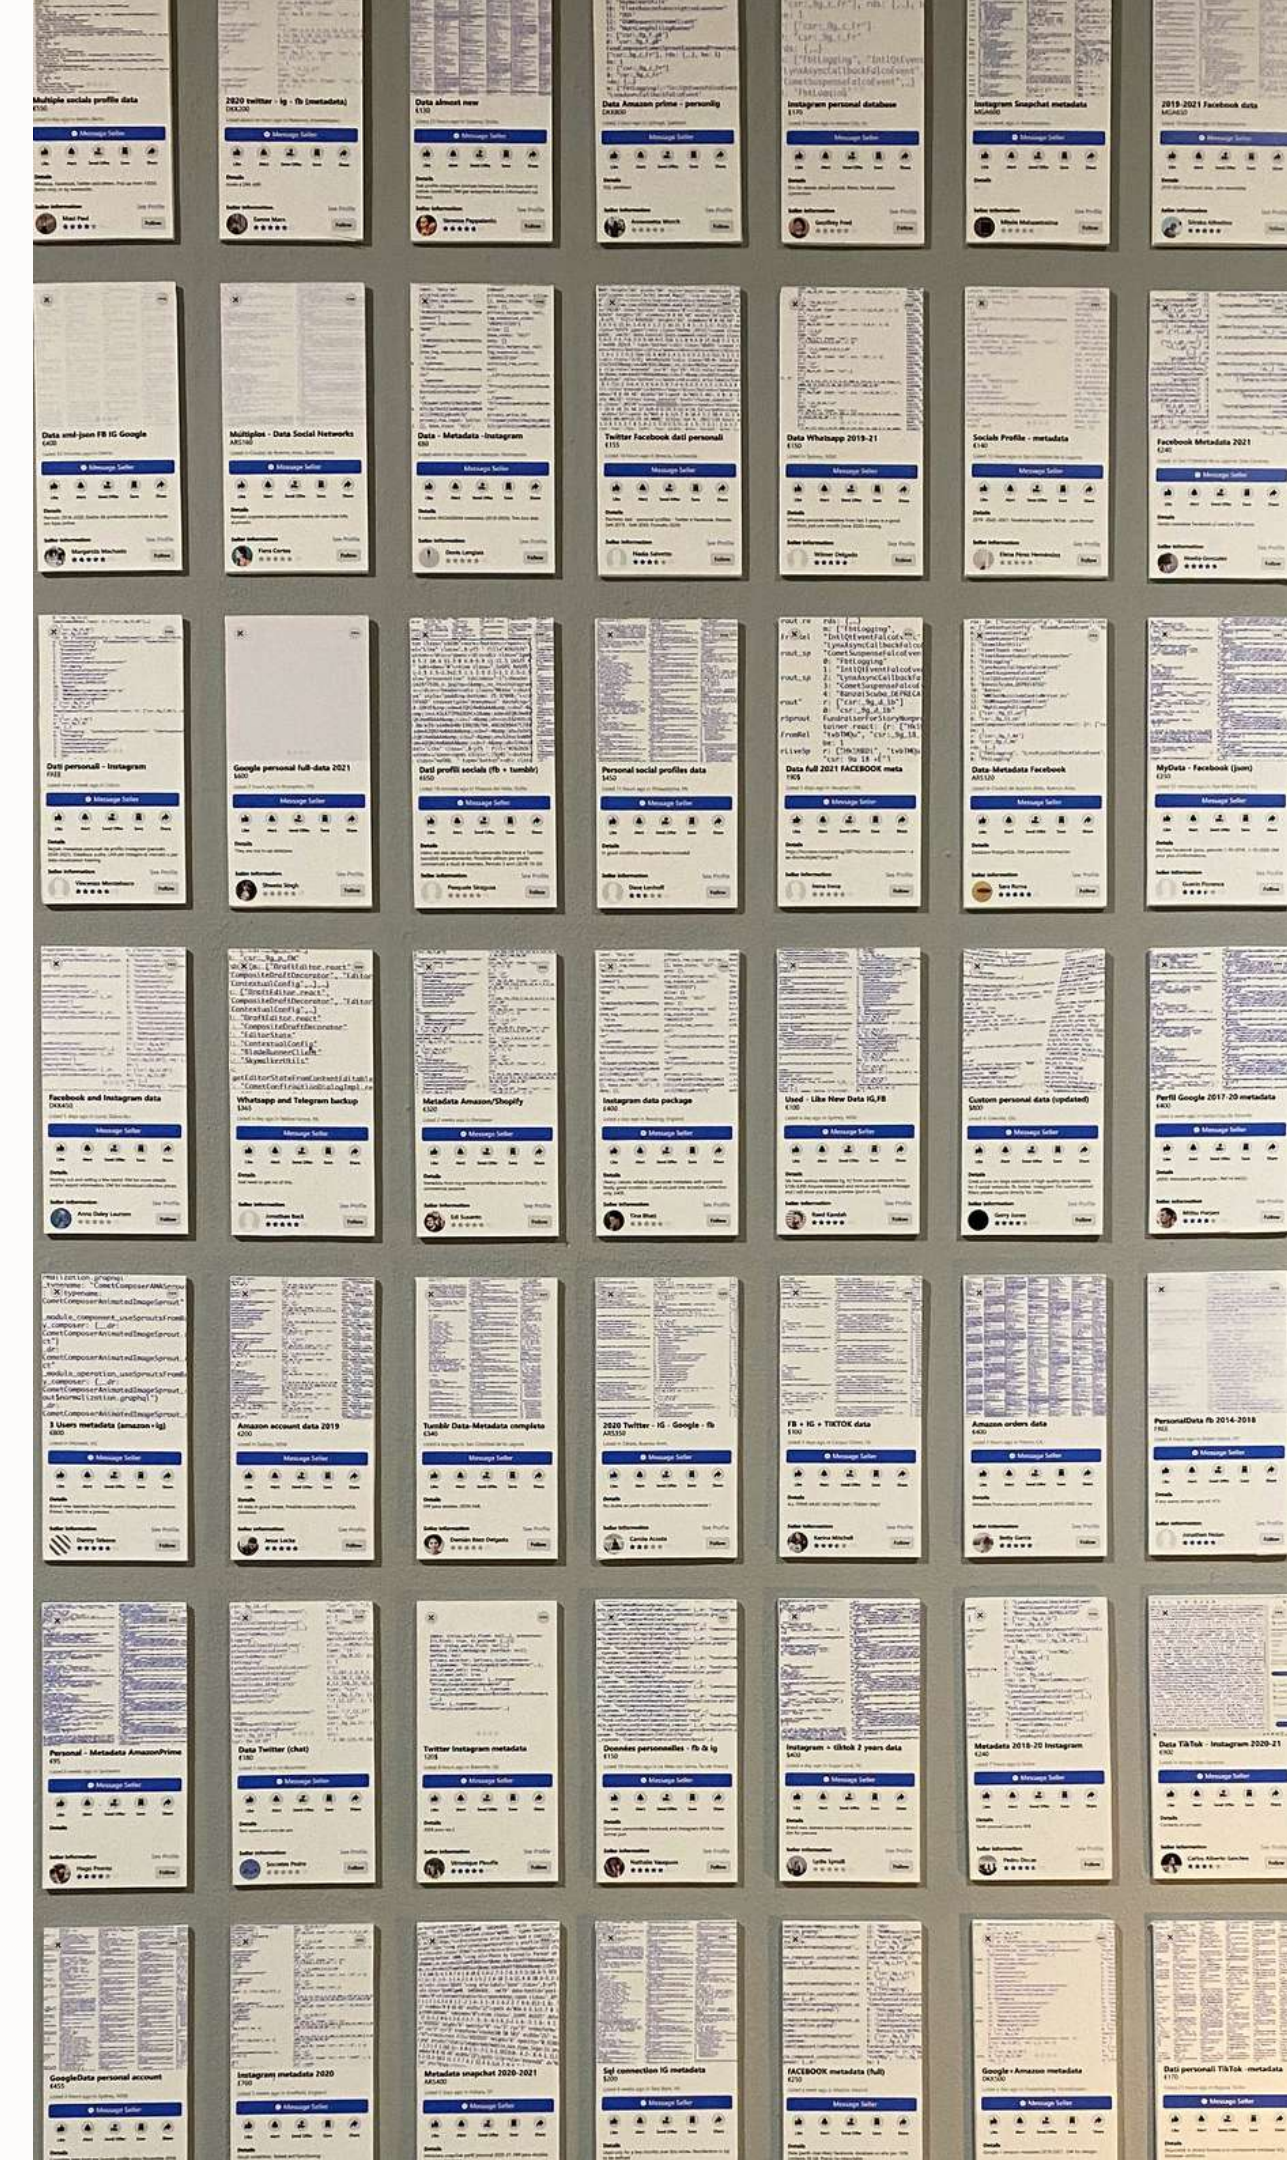

We build security into our services to protect your information. The insights we gain from maintaining our services help us detect and automatically block security threats from ever reaching you. And if we do detect something risky that we think you should know about, we'll notify you and help guide you through steps to stay better protected. We work hard to protect you and Google employees, contractors, and agents who need that information in order to process it. Anyone with this access is subject to strict contractual confidentiality obligations and may be disciplined or terminated if they fail to meet these obligations.

We offer a range of security features, like Safe Browsing, Security Checkup, and 2-Step Verification to help you protect your account. We review our information collection, storage, and processing practices, including physical security measures, to prevent unauthorized access to our systems. We restrict access to personal information to Google employees, contractors, and agents who need that information in order to process it. Anyone with this access is subject to strict contractual confidentiality obligations and may be disciplined or terminated if they fail to meet these obligations.
